

# UFED Physical Analyzer, UFED Logical Analyzer and Cellebrite Reader v7.22

August 2019

App versions: 9,435

## App support

- 113 updated application versions for iOS and Android devices
- Access deleted files and new file formats in WeChat App

### Now supporting the WhatsApp Business App

WhatsApp continues to be the undisputed leader amongst a vast series of social networking and chat messenger apps with more than 600 million users worldwide. Following demand from the market, we introduced support for the popular WhatsApp Business App for both Android and iOS devices. This free app enables businesses to interact with their customers easily by using tools to automate, sort, and quickly respond to messages.

As part of this new decoding support, users can review calls and call logs, chat messages, contacts, images and videos, including geolocation data, user contacts, user account as well as access to deleted data.

## Get new file types with the Generic Carver

UFED Physical Analyzer now enables you to carve for more file formats and recover additional deleted files from databases and unallocated space. In this version, we have expanded our support to include AMR and Silk audio file formats used by the WeChat application, as well as the MP4 video format.

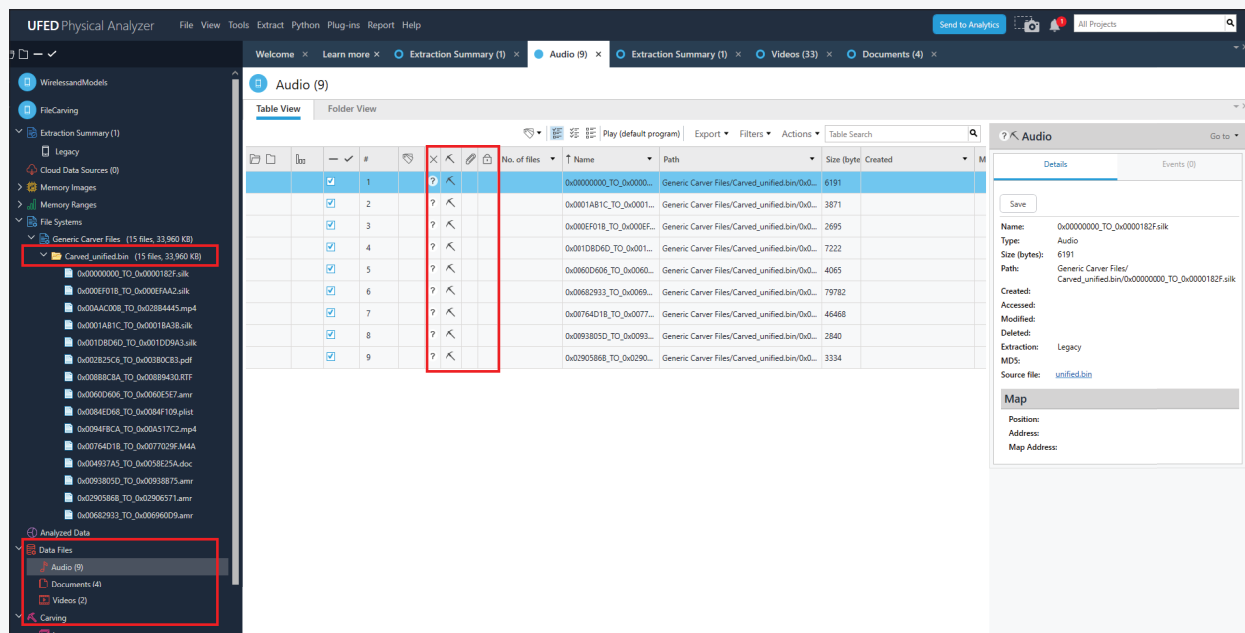

To activate this capability, go to Tools → Get more data (Carving) and select Carve files (generic).

Additional supported formats include: MPEG, Amr, Silk, Mus, Plist, RTF, PDF, and Doc.

Carving results are displayed under File Systems → Generic Carver Files and under Data Files marked with a carved icon.

*Note: MPEG formats can range from Mp4, 3g2, 3gp, F4a, F4b, F4p, F4v, Jp2, Jp20, M4a, M4b, M4p, M4v, Ross, Dvb, Jpm, Jpx, Mj2, Mj4, Mqv, Mov*

**Coming Soon:** A comprehensive generic carving capability is under development and will be announced in upcoming version.

## Check for new product updates

At any point of time, users can check to see if a new version update is available by clicking on: Help → Check for new version

## End of life announcement for Windows 7

Following the announcement from Microsoft about the end of life for Windows 7 on January 2020, Cellebrite will continue to unofficially support UFED Physical Analyzer installations running on this platform until further notice. However, it is always recommended to run on an officially supported platform.

## Solved Issues

The following issues have now been resolved in UFED Physical Analyzer:

- The number of deleted locations is now presented as part of the device content in the extraction summary window.
- When performing an 'Export', Tagged files now include a description.
- Translate content when the target language is set to "Same as Interface language".
- Play silk files in Cellebrite Reader.
- Locations are now presented in the Timeline when opening two merged extractions.

## Cryptographic Hash Values Information

You can validate the integrity of Cellebrite's UFED software files by verifying their cryptographic hash values. This can help you identify whether a file has been changed from its original state.

Product	MD5	SHA-256 (Recommended)
UFED Physical Analyzer	da2a82ab1545087b886af88d8a98b4f5	b7164903d5d8119f8f0b617c8753d6c7e378f6183e2ca68003a403f8540b3960
