

Cellebrite TRAINING

Cellebrite Inseyets Essentials Training for Defense and Intelligence (CIET D&I)

Course Description

The CIET D&I course provides a comprehensive, hands-on introduction to mobile device extractions and post-extraction analysis using Cellebrite's Inseyets UFED and Inseyets Physical Analyzer. Learners explore core concepts, essential workflows, extraction methodologies, device states, evidence handling, and analysis techniques needed to conduct efficient and defensible digital investigations. Through guided practice, scenarios, and lab-based activities, participants build the foundational skills required to acquire, validate, and interpret data from modern Android and iOS devices.

Level	Length	Delivery Mode
Intermediate	Two-Day (14 hours)	In-Person Virtual

Course learning objectives

Upon successful completion of the course, the student will be able to:

1. Describe the core components, capabilities, and use cases of Inseynet UFED and Physical Analyzer.
2. Identify device conditions, states, and factors that affect extraction approach and tool selection.
3. Differentiate between physical, file system, logical, and advanced logical extractions.
4. Configure essential UFED settings to optimize extraction workflows and operational performance.
5. Apply proper extraction sequences to acquire data while preserving integrity.
6. Perform hands-on extractions on Android and iOS devices using the appropriate workflows.
7. Navigate the Physical Analyzer interface to locate, decode, and review extracted data.
8. Analyze artifacts to surface relevant evidence, timelines, communications, and user activity.
9. Produce triage-level and full-analysis reports using Physical Analyzer output options.
10. Evaluate extraction scenarios to select the most effective workflow for a given device or mission context.
11. Integrate extraction and analysis findings into operational, investigative, or intelligence workflows.

Note: CIET D&I is not part of a capstone certification track and intended for non-certification learners.

About Cellebrite Training

Cellebrite Training delivers expert-led digital forensics education built for real-world investigations. Through hands-on, role-based courses—available in person, virtual, and self-paced—we help professionals confidently handle today's digital evidence challenges.
