

# Cellebrite Kiosk

## Competitive Comparison

### What is Cellebrite Kiosk?

Cellebrite Kiosk is an all-in-one digital forensics system designed to allow operators with little to no digital forensics knowledge to perform a complete workflow — from collection to report — at the press of a button. Its fixed-location form factor enables agencies to decentralize digital forensics, placing capability across multiple locations without the risk of equipment being lost or stolen.

The new Kiosk pairs enterprise-grade hardware with the latest Inseyets software, delivering Full File System extraction, the PA10 decoding engine, embedded Turbolink, and flexible licensing — all in a purpose-built, touchscreen-guided package that requires minimal training.

### What Sets Cellebrite Kiosk Apart

While competing kiosk solutions stop at logical extraction, Cellebrite Kiosk goes deeper — delivering enterprise-grade digital forensics capability that keeps pace with modern devices and modern investigations.

- **Multiple extraction options including Select by Content, Advanced Logical, and Full File System**  
Giving operators the right level of access for every investigation, including encrypted, deleted, and hidden content that logical-only solutions miss entirely
- **Latest PA10 decoding engine with Streamline workflow**  
Faster analysis and smarter triage out of the box
- **Inseyets Core or Pro compatibility**  
Full access to the Cellebrite investigative ecosystem, not a siloed product
- **Embedded Turbolink**  
No separate hardware purchase, no added cost or complexity
- **Flexible licensing**  
Online, offline, and hybrid options that adapt to any deployment environment
- **Open Image support**  
Meets diverse organizational security requirements including high-security environments

| FEATURE / CATEGORY       | CELLEBRITE KIOSK                                                                                                                                                                                                                          | COMPETITION                                                                                                              |
|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|
| Extraction Methods       | Multiple extraction options across all methods — Select by Content for targeted triage, Advanced Logical for standard cases, and Full File System (FFS) to access encrypted, deleted, and hidden data on the latest iOS & Android devices | Logical extraction only — no targeted content selection, no FFS capability, significant data gaps on modern devices      |
| Decoding Engine          | Latest PA10 decoding engine with Streamline workflow options — faster triage, smarter analysis, and optimized investigative workflows built in                                                                                            | Standalone decoding — no Streamline or equivalent modern workflow options, slower time to insight                        |
| Software Platform        | Powered by Inseyets Core or Pro — full access to the Cellebrite investigative ecosystem including advanced analysis, reporting, and case management                                                                                       | Proprietary software only — locked into vendor ecosystem with no pathway to broader investigative platform capabilities  |
| Ecosystem Integration    | Fully integrated with the broader Cellebrite platform — seamless data flow from field extraction through analysis to court-ready reporting                                                                                                | Standalone solution — no integration pathway to broader investigative tools or cross-platform workflows                  |
| Audit & Compliance       | Full audit logging natively integrated with Cellebrite's chain-of-custody platform — forensically sound and court-ready                                                                                                                   | Separate audit logging — limited cross-platform investigative integration, not natively tied to a broader evidence chain |
| Licensing Flexibility    | Flexible online, offline, and hybrid licensing — adapts to networked, air-gapped, and hybrid deployment environments                                                                                                                      | Rigid offline-only licensing — no flexibility for agencies requiring online or hybrid configurations                     |
| Turbolink / Connectivity | Turbolink embedded directly in hardware — no separate purchase, no added cost or complexity                                                                                                                                               | No embedded Turbolink equivalent — requires separate cable accessories, adding cost and setup friction                   |
| Open Image Support       | Open Image support — adaptable to diverse organizational security requirements including high-security environments                                                                                                                       | Locked-down configuration only — limits deployment flexibility in security-sensitive environments                        |
| Form Factor              | All-in-one fixed-location kiosk — purpose-built for field deployment with guided touchscreen workflow                                                                                                                                     | All-in-one fixed-location kiosk — same form factor, without the extraction depth or platform integration                 |
| Training Required        | Minimal training required — guided touchscreen workflow designed for non-technical operators to run extractions independently                                                                                                             | Minimal training — step-by-step extraction workflows, but limited by shallower extraction capability                     |

## Key Takeaway

The new Kiosk solution delivers a generational leap over Responder — offering deeper extraction capabilities, a more capable decoding engine, flexible licensing, and full Inseyets ecosystem compatibility. Existing Responder customers gain capabilities they simply do not have today, with the same familiar kiosk form factor they already rely on.

## About Cellebrite

Cellebrite's (Nasdaq: CLBT) mission is to protect communities, nations and businesses as a global leader in digital investigative and intelligence solutions. More than 7,000 global law enforcement agencies, defense and intelligence organizations and enterprises trust Cellebrite's AI-powered software portfolio to make forensically sound digital data more accessible and actionable. Cellebrite technology allows customers to accelerate more than 3 million legally sanctioned investigations annually, enhance sovereign security, elevate operational efficacy and efficiency and enable advanced mobile research and application security. Available via cloud, on-premises and hybrid deployments, Cellebrite's technology enables its customers around the globe to advance their missions, elevate public safety and safeguard data privacy.
