

Every Soldier a Sensor. Every Device a Source.

Cellebrite Tactical Extraction Kit (C-TEK)

Most devices captured in the field are never examined. Without immediate isolation, a device's location history, contacts and communications can be wiped in seconds. Without a portable extraction capability, it sits unanalyzed for days or reaches a lab in a format that resists quick use.

Today, that capability sits with one or two trained specialists in a unit, if it exists in the field at all. Every device that passes through unchecked is a missed opportunity.

Cellebrite Tactical Extraction Kit (C-TEK)

Cellebrite Tactical Extraction Kit (C-TEK) closes that gap. Any trained operator can now do in minutes, in the field, what previously required a specialist, a lab and days of processing.

Self-contained and deployable in under 5 minutes. Getac tablet or laptop with Inseyets, complete with power, containment and connectivity - all in a single waterproof backpack.

CLOSE THE GAP

Every objective and patrol becomes a potential source of decision advantage, not just the ones where a specialist happens to be standing by.

BUILT FOR THE HANDOFF

Findings are structured to move cleanly from the field to the forward operating base (FOB) or lab, so nothing has to be reprocessed before the next stage.

FORENSIC INTEGRITY

Faraday containment blocks remote wiping and new data writing the instant a device is secured.

What's In the Kit

Durable, waterproof backpack

Everything needed to extract and analyze in the field, packed into a durable, waterproof backpack with room for additional gear

Kit components

Extract from almost anything

Phones, drones, computers and more

- **Ruggedized tablet or laptop with Inseyets installed and Turbo Link adapter:** Offline on-site extraction and analysis of phones, drones, SIM cards, SD cards and more
- **Digital Collector 4TB dongle:** On-site computer collection and storage
- **USB hub:** Connect more devices at once
- **Cable kit:** Access to a wide range of device types

Power anywhere, no grid required

Battery, vehicle and NATO military adapters

- **26K battery bank:** Extra runtime, no outlet needed
- **DC-to-AC inverter:** Charge from a vehicle
- **5590/2590 charger:** Run on NATO-standard military batteries

Forensic integrity from first contact

Faraday bags to block remote wipe/write

- **S/M/L Faraday bags:** Suitable for phones, drones, computers and more

How C-TEK Feeds the Mission

STAGE 1: EDGE

C-TEK

Acquire and triage at the point of capture with C-TEK

On-device extraction and ML-assisted triage, so operators know what matters before they leave the scene.

STAGE 2: ANALYSIS

Go deeper at the lab or FOB with Pathfinder

Powerful multi-device threat network analysis on data handed off from the field.

STAGE 3: COMMAND

Plan operations and drive decisions with Guardian

Secure cloud dissemination for a common operating picture.

Every device examined at the edge is a threat identified before it acts.

Ask about the full range of Cellebrite mission systems capabilities.
