SOLUTION BRIEF

The New Age of Digital Investigations

Agentic AI that moves teams from evidence overload to case clarity

Investigative teams are overwhelmed by the amount of digital evidence. Teams have a lot of data available to them, but a case's progress depends on how quickly they can find the leads, timelines and connections buried inside.

Cellebrite Genesis brings agentic AI into digital investigations, helping teams move from evidence overload to case clarity faster.

It surfaces key insights across volumes of case data, enabling investigators to analyze evidence faster and uncover connections that would otherwise take days or weeks to find.

Move Faster Through Case Data

Real investigations do not arrive in one tidy format. Genesis helps teams reason across the evidence types that shape case clarity, including UFDRs, portable cases, call detail records, documents, media and device artifacts.

01

Prioritize What Matters

Turn evidence into focused leads, entities and timelines instead of reviewing every artifact one by one.

02

Connect The Evidence

Bring together evidence across devices, reports and records to reveal relationships that would otherwise remain hidden.

03

Go Deeper When Needed

Explore the underlying application data to uncover additional investigative leads.

04

Validate Every Finding

Trace every finding back to its source with confidence indicators to support verification.

Built for secure, reviewable investigations

Sensitive evidence demands more than fast answers. Genesis supports AI-assisted review with oversight, source-linked outputs and controlled data handling.

- Surface relevant details, timelines and patterns for review without replacing human judgement.
- Link outputs back to supporting messages, media, records and device artifacts before teams decide what moves forward.
- Support governed workflows for sensitive investigation data.

//

In a recent grooming and exploitation case, our team ingested data from three suspect devices, and within 15 minutes Genesis surfaced 16 previously unidentified victims. Manual review would have taken our investigators an estimated two weeks. The case has since been forwarded to federal prosecution. Genesis is no longer a luxury tool. It is a critical resource for victim identification in time-sensitive exploitation cases."

- Lt. Jerod K. Abshire of the Digital Forensics Unit with the Calcasieu Parish Sheriff's Office

//

A case we are working related to potential financial wrongdoing in an IPO that was ultimately scrapped; it took us months to piece together who was involved. When we ran all the data through Genesis, it took minutes to surface the same information.

The speed and accuracy amazed us and helped validate our original findings."

- Bruce Keeble of Interpath

Where Genesis Helps Teams Move Faster

- AI-Powered Analysis Across Multiple Data Sources
- Backlogged or Under- Reviewed Cases
- Identifies Key Moments in Video
- Cases with Limited Mobile Data
- Supports Translations and Multilingual Investigations
- Handles Large Video and Audio Collections
- Isolates Specific Windows of Time
- Revisiting Historical Cases

See how Genesis makes investigations faster and easier.

Get results in minutes.
