The Field-Proven Tool You Trust.
Reimagined for What's Next.

CFID - COVERT FORENSIC IMAGING DEVICE

As the volume and variety of digital data continues to grow, field teams need technology that keeps pace. The next generation of CFID builds on the proven foundation of the legacy model with faster performance, expanded storage, and smarter on-device analysis, giving teams the power to extract and review more digital evidence and intelligence from drones and devices at the point of capture.

CAPABILITY	THE LEGACY CFID	THE NEXT GENERATION CFID
Form factor	Tough aluminum case	Tough aluminum case
Processor	Dated dual-core ARM processor	Modern 8-core ARM processor
Memory	4 GB DDR3 RAM	16 GB LPDDR5 RAM
Internal storage	Fixed 128 GB SSD	Ships with 2 TB M.2 NVMe storage; user-expandable
Display	Standard touchscreen display	5.5-inch 1080p AMOLED touchscreen
Media preview	Not Available	Preview photos and videos directly on the device during extraction
Flight-path viewing	Requires a separate Android viewer application	Visualize drone flight paths with on-device offline mapping
Multi-device workflows	Not Available	Simultaneous processing across multiple devices
Data transfer	Earlier-generation I/O	USB 3.1 Gen 2 high-speed I/O
Charging and power	Earlier-generation charging (6-hour battery life dormant)	USB-C Power Delivery for faster charging and use with compatible external power sources (8-hour battery life dormant)
External display	Not Available	USB-C DisplayPort for debriefs, training, and presentations with 'presenter mode' for touch identification.

Faster insights. Greater capacity. More capability.

Process More Data with Confidence
Handle larger datasets and the growing demands of newer drones and digital devices with more processing power, memory, and storage.

Make Decisions While Still in the Field
Preview media, review flight paths and process multiple evidence sources in the field so important next steps do not have to wait.

Keep Operations Moving
Run simultaneous processes across connected devices and media, helping teams spend less time working around equipment limitations.

Move Forward with a Modern Platform
Adopt newer hardware intended to support continued product development as technology and investigative requirements evolve.
